

Paving impregnator for a long-lasting protection of your paving stones.

# proPERLA® Paving Impregnator

For an efficient protection of paving stones.

BEFORE

AFTER

## The benefits of applying it

The floor remains clean and attractive, even on sides which are particularly exposed to the weather.

Dirt particles are unable to obtain a hold on the proPERLA® coated paving and will simply flow off with rainfall.

It protects surfaces against rain, dirt, green growth, pollution, oil and many more.

A paving impregnator will keep your exterior areas looking as good as new for a long time.

Scientifically tested for the protection of mineral surfaces.

## Self cleaning effect

Dirt particles are unable to obtain a hold on the proPERLA® coated paving and will simply flow off with rainfall. The floor remains clean and attractive, even on sides which are particularly exposed to the weather like on the north-facing side or pavements in shade, as well as in areas with high air humidity or sea salt penetrated air.

## Super hydrophobic

You will recognise the excellent water-repellent properties water-repellent properties by their behaviour behaviour. It will make the pavement dry and extremely resistant to biological hazards biological hazards, mould, fungi, etc. A dry floor prevents frost damage and reduces the growth of microbial spores. and reduces the growth of microbial spores
