

Wood impregnator for a long lifespan of your wood surfaces.

# proPERLA® Wood Impregnator

The clear protection of your wood surfaces.

BEFORE

AFTER

## The benefits of applying it

It protects wooden surfaces such as hardwood terraces, beams or wooden boards against premature aging.

Thanks to its extreme beading effect, it effectively prevents the shrinkage or splitting of wood.

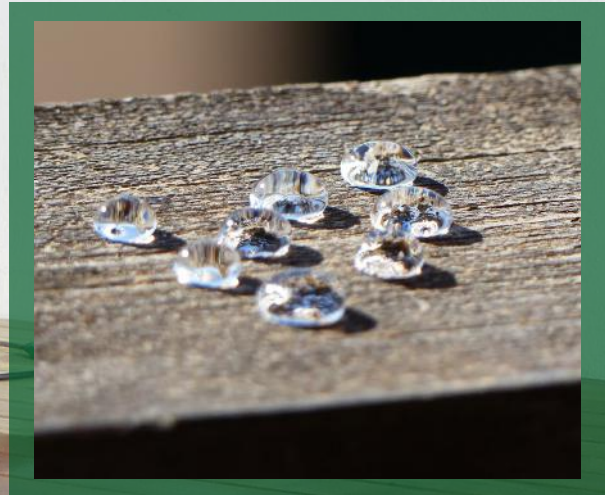

Microorganisms can not adhere and green growth of green is drastically minimized.

Dirt particles are unable to obtain a hold on the proPERLA® wooden surface and will simply flow off with rainfall.

The product is not hazardous to the environment or the people.

## Super hydrophobic

You will recognise the excellent water repellent properties by its beading behavior. It will make the surface dry and extremely resistant to biological hazards, mould, mildew, etc. A dry surface will improve the thermal resistance, prevent frost damage and reduce the growth of microbial spores.

## Self cleaning effect

Dirt particles are unable to obtain a hold on the proPERLA® coated surface and will simply flow off with rainfall. The surface remains clean and attractive, even on sides which are particularly exposed to the weather, as well as in areas with high air humidity or sea salt penetrated air.
